

PDF Signer Test Document

This PDF is intentionally unsigned and is intended for local development tests.
It can be used to test byte-for-byte copying, startxref discovery,
incremental updates, ByteRange placeholders, and later CMS signing.

Document ID: PDF-SIGN-TEST-001

Expected signer: Test Certificate

Status: UNSIGNED

Known test values

Alpha: 1234567890

Beta: ABCDEFGHIJKLMNOPQRSTUVWXYZ

Gamma: The quick brown fox jumps over the lazy dog.

Reserved visual area - no signature appearance is present yet.

A later test may append signature-related PDF objects without changing these bytes.

Page 2 - Additional Content

This second page makes the fixture slightly less trivial.

The source file should remain an exact byte prefix after a valid incremental update.

Any appended objects, xref section, trailer, startxref and EOF marker belong after it.

End of test content.
